LINEAR WOOD

PLANKS DATA SHEET

PRODUCT DESCRIPTION

MCM Acoustical's Linear Wood Plank is a natural wood veneered product available in a wide range of veneers and sizes. These planks are designed with standard 5/8" Fire-Rated MDF core or solid wood. Other thicknesses are also available. Planks are grooved on the sides to receive mounting clips and felt mat. Insulation can be placed above the planks for improved acoustical performance.

FEATURES

DIMENSIONS: The standard plank width is 5", although custom width are available. The standard plank lengths are 8' (2.4m) or 10' (3m), although custom lengths are available.

VENEERS: The Planks can be customized in a variety of wood veneers. MCM Acoustical lays-up its own veneer random matched.

FINISHES: The Planks can be finished in standard clear lacquer or can be custom stained to match a control sample. The Planks can also be painted.

SUSTAINABILITY

FSC Certified 70.8% pre-consumer recycled content Declare label CDPH VOC Certified

FIRE PERFORMANCE

The Linear Wood Planks are Class A Fire-Rated interior wood finish products as per ASTM E84 and CAN/ULC S102, and are tested in an accredited NVLAP test facility as a finished composite product using Class A individual components.

INDOOR AIR QUALITY

The Linear Wood Planks are certified Clean Air Gold and meet the CDPH Standard VOC emissions.

ACCLIMATIZATION

Like any other architectural natural wood product, the Linear Wood Planks are to be acclimatized inside a controlled interior environment for at least 72 hours before installation. During storage, prior to installation, during installation, and after installation the relative humidity level of 35%-55% and a temperature range of 20°-27°C (68°-81°F) must be maintained.

ACOUSTIC PERFORMANCE

Linear Wood Planks are not perforated or grooved and are therefore reflective. If the project requires acoustic performance, please see our Perforated or Grooved Panels & Planks.
